Container Wall Air Relief Grille

Wall Air relief grilles are typically used to help maintain heat discharge in areas where constant air transfer is required. Our grilles can be fixed or welded into the side of your converted shipping container.

Ventilation in containers is typically used in portable plant containers, boiler houses, shipping container welfare and toilets blocks.

Steel welded box section frames are required to weld the louvre within.

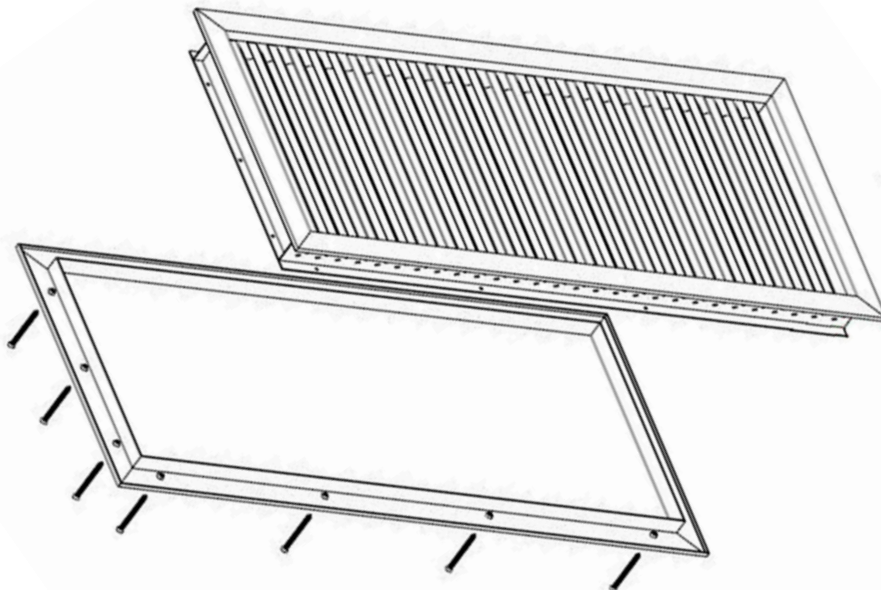

Steel welded box section frames are required to weld the louvre within.

- Fixed blade design
